

Revenue Analysis - Zomato Company

Prepared For: Revenue Management Analysis Team

Introduction

As a Revenue Management Analyst at Zomato Company, this project presents a multi-dimensional analysis of Zomato's revenue health (2017 - 2020) using Power BI, utilizing a relational data model of Orders and Restaurants. By slicing key sales metrics across four primary dimensions— Month, Year, Cuisine, and City — we have identified significant patterns in demand. Offering prescriptive recommendations for Marketing strategy and Customer Service resource allocation to ensure a consistent upward trajectory in revenue.

Executive Summary

- Between 2017 and 2020, the portfolio experienced a sustained downward trajectory in gross revenue.
- Key Performance Indicators (KPIs):
 - Total Revenue: 986.63M Indian Rupee
 - 100K Total number of Users
 - 105.92K Total number of restaurants - included Franchise and restaurant chains
 - The Zomato company covered 821 cities in India
- Identifying seasonal growth trends and revenue fluctuations across multiple cities and cuisine categories.
- V-shape in yearly revenue trend report, significant decrease in 2019 (Pandemic)
- Frustrated revenue report from 2017 - 2020, and overall downward trend.
- Revenue has trended downward significantly, with January performance serving as a key indicator of year-over-year (YoY) erosion.
 - Jan 2018: 42,521,659 INR
 - Jan 2019: 31,531,844 INR (-26% YoY change)
 - Jan 2020: 25,659,711 INR (- 19% YoY change)
- Find out the root causes of the decrease in revenue over 4 years and recommend a marketing campaign and the next step for the Revenue Management team to analyze deeper in the customer segment, restaurant, external impact, and so on, before deciding on the increasing revenue strategy.

Methodology and Data Sources

1. Data Sources:

- Data file: orders and restaurants
- Using the orders table as a fact table.
- Joins: orders.r_id = restaurants.r_id

Relationship: Many-to-one and cross-filter direction for both.

2. Data Preparation/Cleaning:

All Tables	• Rename column 1 for all tables as rn (row number) • Remove unnecessary columns
Restaurant Table	• Delete the blank in the restaurant name • Capitalize Each Word for the restaurant name • Split the cuisine column
Order Table	• Add column: currency_clean: replace "USD" with "INR" • Add Column: sales_INR: convert sales amount to the same currency (USD -> INR) 1 dollar = 91 Indian Rupee IF function: sales_INR = IF(orders[currency] = "USD", orders[sales_amount] * 91, orders[sales_amount])

3. Metrics:

- Revenue per City: Identify Top highest revenue cities.
- Revenue per Cuisine: Identify Top highest revenue cuisines.
- Average Revenue by Year: Analyze the sales trend over 4 years.
- Average Revenue by Month Analyze the sales trend and demand season pattern.
- Sales rate (%) by Cuisine, Cities: Analyze the % of revenue covered by top 30 cities and top 10 cuisines.

4. Analytical Approach:

Key Performance Indicators (KPIs):

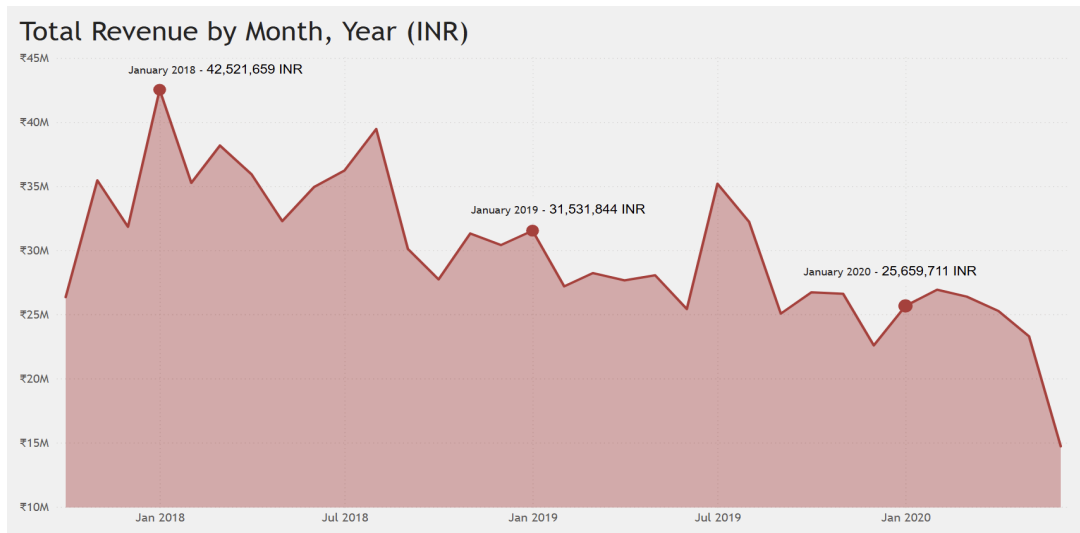

- Business performance
- Company website performance: Total restaurant id, Total users id.

Using time-series analysis

- Predictable demand patterns that repeat over a specific period.
- Identify the general moving trend over the years.

Analysis & Key Findings

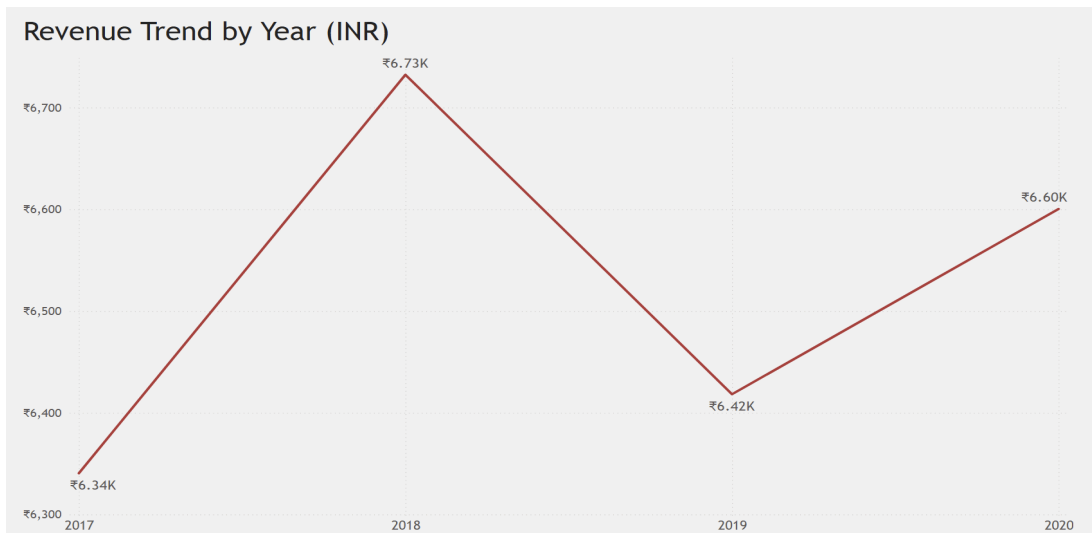

1. How has the revenue performance been over the 4 years (2017 -2020)?

Data from our January performance serves as a primary indicator of this decline, with a sharp 26% drop in 2019 followed by a further 19% decrease in 2020. While the onset of the pandemic exacerbated the 2020 figures, the underlying downward trend suggests deeper systemic issues across city-specific markets and cuisine categories that predated the global crisis.

The data shows the fluctuation in total sales by month, year over 4 years, but overall was a decrease about 39% from 2018 to 2020 (using January as a base to analyze)

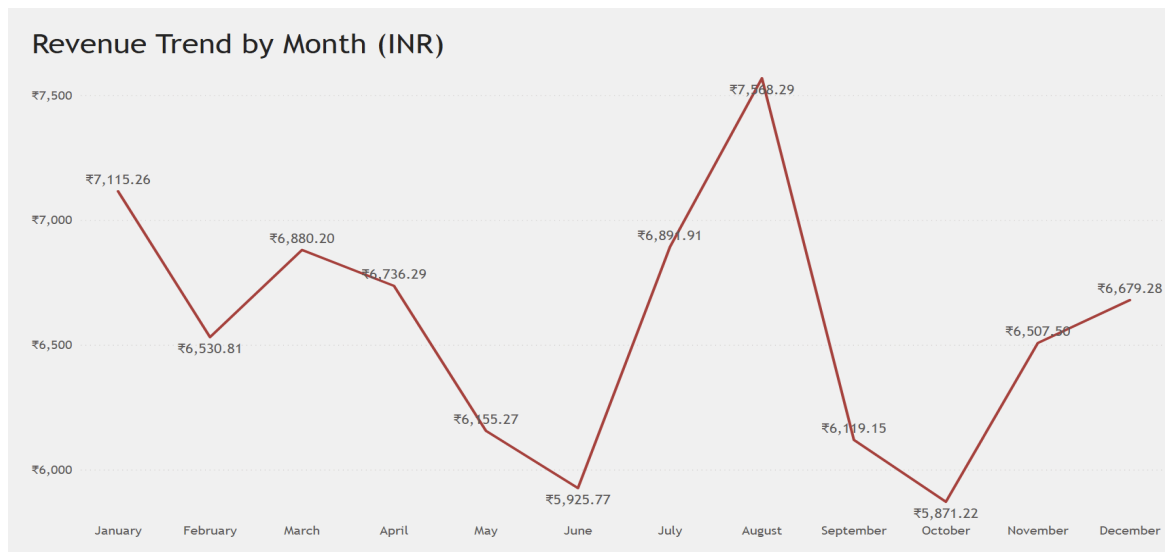

2. What is the business sales trend over 4 years?

Analysis the average revenue metric is showing the stable in total sales. Average revenue in 2018 was 6.73k Indian Rupee, downward trend in 2019 was 6.42k Indian Rupee, upward back in 2020 was 6.60k Indian Rupee.

Recommend the strategy to keep the upward trend in revenue, analyze the customer segment by family size, customer occupations, customer married status and market trend of food delivery demanding.

3. Which month has the highest/ lowest revenue?

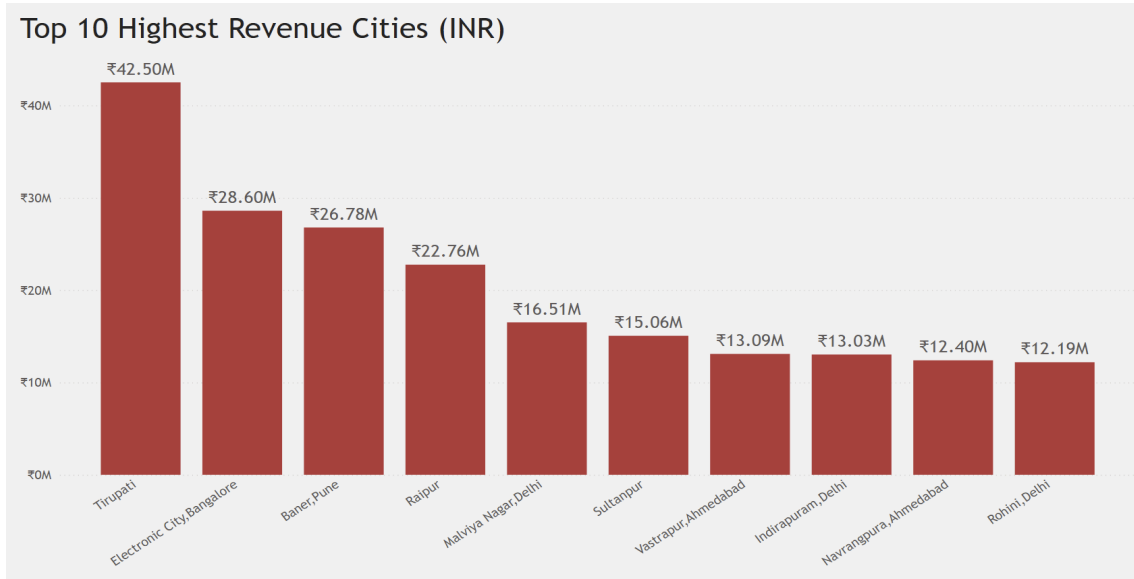

Analysis of the average revenue metric by month to analyze the demand pattern:

The lowest average revenue dropped on June - Summer time (5926.77 Indian Rupee), September and October - Indian Holiday season, indicating a disconnect between traditional holiday seasons and our current value proposition.

Peak Performance: Revenue surged in August (₹7,568), December (₹7,115), and January (₹6,679). These peaks correlate directly with maximum web/app engagement and high-intent digital traffic.

Evaluate the impact of the marketing campaign in quarter 3: The Q3 campaign yielded mixed results: while August saw a record high, the momentum failed to carry into the September/October period. This suggests the campaign successfully captured early demand but lacked the "staying power" to convert during the competitive Indian holiday season.

4. What are the highest-revenue cities?

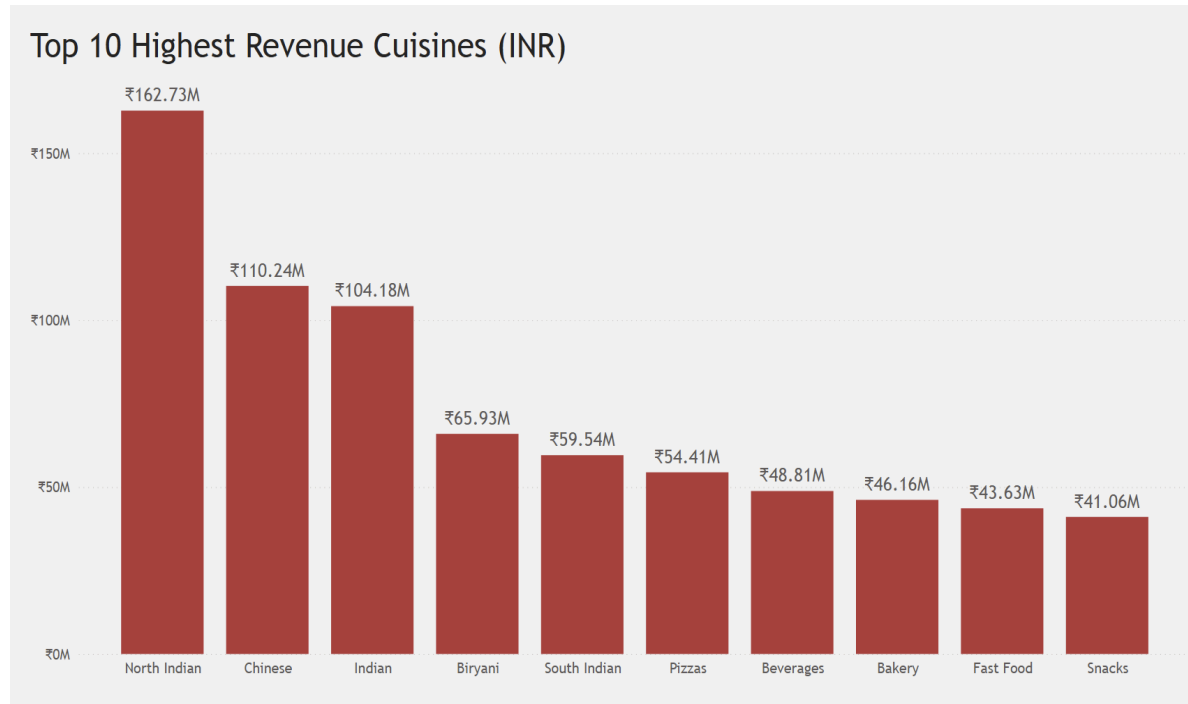

city	Revenue	Sales Rate (%)
Tirupati	₹42,503,460.00	4.31%
Electronic City, Bangalore	₹28,599,623.00	2.90%
Baner, Pune	₹26,784,833.00	2.71%
Raipur	₹22,756,624.00	2.31%
Malviya Nagar, Delhi	₹16,508,442.00	1.67%
Sultanpur	₹15,056,504.00	1.53%
Vastrapur, Ahmedabad	₹13,091,765.00	1.33%
Indrapuram, Delhi	₹13,027,458.00	1.32%
Navrangpura, Ahmedabad	₹12,396,403.00	1.26%
Rohini, Delhi	₹12,189,017.00	1.24%
Bikaner	₹11,355,334.00	1.15%
Tirupur	₹10,930,719.00	1.11%
Bopal, Ahmedabad	₹10,830,446.00	1.10%
Ghatlodia, Ahmedabad	₹10,564,418.00	1.07%
Hinjewadi, Pune	₹10,505,601.00	1.06%
Sirsa	₹10,306,212.00	1.04%
Sonipat	₹10,055,161.00	1.02%
BTM, Bangalore	₹8,986,541.00	0.91%
GOTA, Ahmedabad	₹8,933,109.00	0.91%
Viman Nagar, Pune	₹8,801,875.00	0.89%
Ranchi	₹8,533,995.00	0.87%
Chandkheda, Ahmedabad	₹8,296,678.00	0.84%
Rajouri Garden, Delhi	₹8,261,529.00	0.84%
Agra	₹8,118,481.00	0.82%
NSP, Delhi	₹7,982,889.00	0.81%
Connaught Place, Delhi	₹7,958,916.00	0.81%
Rajahmundry	₹7,716,956.00	0.78%
Trichy	₹7,590,824.00	0.77%
Bareilly	₹7,395,197.00	0.75%
Solapur	₹7,176,317.00	0.73%
Total	₹383,215,327.00	38.84%

Analysis of the revenue metric by geographic to identify the highest revenue by cities. Tirupati city has a highest revenue, 42,50M Indian Rupee and following by Electronic City, Baner city and Raipur city (28.60M, 26,78M and 22,76M Indian Rupee)

Zomato Company covered 821 cities in India. Top 30 cities in India was cover about 38,84% of Zomato Comapany revenue, recommend to focus on these cities for marketing campaign, delivery and customer services, potentially to expand the market.

5. What are the highest revenue cuisines?

cuisine	Revenue	Sales Rate (%)
North Indian	₹162,733,322.00	16.49%
Chinese	₹110,241,318.00	11.17%
Indian	₹104,176,468.00	10.56%
Biryani	₹65,926,366.00	6.68%
South Indian	₹59,536,386.00	6.03%
Pizzas	₹54,411,906.00	5.52%
Beverages	₹48,805,744.00	4.95%
Bakery	₹46,157,152.00	4.68%
Fast Food	₹43,631,643.00	4.42%
Snacks	₹41,057,491.00	4.16%
Total	₹736,677,796.00	74.67%

Analysis of the revenue metric by cuisine to identify the customer demand in India.

The most popular cuisines are North Indian, Chinese and Indian. Following by Biryani, South Indian, and Pizza.

Focusing on the vendors of these cuisine groups for the marketing campaign.

Top 10 cuisines covered 74,67% Total Revenue. Indian and Chinese cuisines are the most popular, total sales about 370M Indian Rupee, and cover about 37% total revenue.

Recommend to keep the diversity of the cuisine, focusing on top 3 popular cuisine for marketing, food events, restaurant weeks, restaurant competition and so on

Recommendations and Conclusions:

Recommendation 1: The team must prioritize a root-cause diagnostic focusing on customer segment churn, restaurant partner retention, and competitive external impacts. Identifying these drivers is a mandatory prerequisite before deploying any new revenue-increasing strategies to ensure sustainable growth.

Recommendation 2: Recommend to operation team focusing on upgrading customer service, delivery service during the high-demand season.

Recommendation 3: Recommend to marketing team for marketing campaign more effectively, promotions for the second order, host the restaurant event as restaurant week, happy hours, restaurant competition during the low-demand season.

Recommendation 4: Analyze the Customer Segment to find the main reason of downing trend in revenue report. Deep dive into analyze the revenue from one-time purchase and returning customer list. Strategy to convert one-time purchase customer to returning customers.
