Create a table that has the highest and lowest amount of money raised for each date in the funding_round table.

```
WITH selected_fund AS (  
    SELECT funded_at,  
           MIN(raised_amount) AS lowest_amount,  
           MAX(raised_amount) AS highest_amount  
    FROM funding_round  
    GROUP BY funded_at)  
  
SELECT *  
FROM selected_fund  
WHERE lowest_amount > 0 AND lowest_amount <> highest_amount;
```

Result

funded_at	lowest_amount	highest_amount
2012-08-22	40000	7.5e+07
2010-07-25	3.27825e+06	9e+06
2002-03-01	2.84418e+06	8.95915e+06
2010-10-11	28000	2e+08
2007-01-18	5.5e+06	2.3e+07

Create a new field with categories: high_activity, middle_activity and low_activity

Calculate the average number of funding rounds the fund participated in. Round it to the nearest whole number. Print the categories and the average number of funding rounds.

```
WITH fund_performance AS  
    (SELECT *,  
     CASE  
         WHEN invested_companies >= 100 THEN 'high_activity'  
         WHEN invested_companies >= 20 THEN 'middle_activity'  
         ELSE 'low_activity'  
     END AS activity  
    FROM fund)  
  
SELECT activity,  
       ROUND(AVG(investment_rounds)) AS avg_number_of_funding_round  
FROM fund_performance  
GROUP BY activity  
ORDER BY avg_number_of_funding_round;
```

Result

activity	avg_number_of_funding_round
low_activity	2
middle_activity	51
high_activity	252

Make a list with the names of companies that closed down and had only one funding round while they existed. Calculate the number of degree type for each employee from the list of found companies.

```
SELECT p.id,
       COUNT(e.degree_type) AS total_degree_type
FROM people AS p
JOIN education AS e ON e.person_id = p.id
WHERE p.company_id IN
      (SELECT c.id
       FROM company AS c
       JOIN funding_round AS f ON f.company_id = c.id
       WHERE (f.is_first_round = 1 AND f.is_last_round = 1)
            AND c.status = 'closed')
GROUP BY p.id;
```

Result

id	total_degree_type
349	0
699	1
779	2
968	1
972	1
1107	0

Write a similar query: print the average number of degree types (all, not just the unique ones) that employees of Facebook graduated with.

```
WITH facebook_employee AS
  (SELECT p.id, p.company_id, COUNT(e.degree_type) AS total_degree_type
   FROM education AS e
   JOIN people AS p ON e.person_id = p.id
   WHERE p.company_id IN (SELECT id
                        FROM company
                        WHERE name = 'Facebook'))
GROUP BY p.id, p.company_id)

SELECT AVG(total_degree_type)
FROM facebook_employee;
```

Result

avg

1.31111

Export a table containing the following fields:

- Name of the buying company
- Transaction amount
- Name of the acquired company
- Amount of money invested in the acquired company
- Percentage (rounded to the nearest whole number) showing how much the acquisition amount exceeded the amount of money invested in the company

```
SELECT c.name AS buying_company,
       a.price_amount AS transaction_amount,
       c1.name AS acquired_company,
       c1.funding_total AS invested_amount,
       ROUND(a.price_amount/c1.funding_total) AS percentage
FROM acquisition AS a
LEFT JOIN company AS c ON a.acquiring_company_id = c.id
LEFT JOIN company AS c1 ON a.acquired_company_id = c1.id
WHERE a.price_amount > 0 AND c1.funding_total > 0
ORDER BY transaction_amount DESC, acquired_company
LIMIT 10;
```

Result
